Mathematical Engine: The engine performs all of the mathematical calculations that are entered into Maple. Normally, a new engine is created for each document, although engines can be shared across multiple documents.

How should Maple handle the creation of new Math Engines?

Create a new engine for each document

Enable RTF copy: Only for small selections

Plot print quality: High Quality

Language: System Default

Restart Maple for language change to take effect.

Input display: Maple Notation

Output display: 2-D Math Notation

Typesetting level: Maple Standard

Assumed variables: Trailing Tildes

Plot anti-aliasing: Enabled

Font anti-aliasing: Default

Plot display: Inline

Show task variables on insert: Only On Naming Conflict

Task content to insert: Standard Content

- Automatically display legends in 2-D plots
- Enable rollover highlighting in plots
- Use hardware acceleration for plots
- Replace existing output when re-executing groups
- Always insert new execution group after executing
- Show equation labels
- Display output from Evaluate (Document Blocks)
- Enable self-documenting context menu evaluations
- Expose commands inserted from Load/Unload Package menus

Encoding

Standard Worksheet (.mw) format does not require encoding.

Classic Worksheet (.mws):

Other formats:

Applies to HTML, LaTeX, plain text, Maple text, Maplet, and RTF exports.

LaTeX document class:

Include LaTeX CJK package support

Embeds the following support for CJK package:
- `\begin{CJK}` after `\begin{document}`
- `\end{CJK}` before `\end{document}`

Math linebreaking width:

Applies to HTML and LaTeX exports.

Export to PDF format:
 Export using text for searchable text and smaller file size
 Export using shapes for greater fidelity
